TIMM8A gene
translocase of inner mitochondrial membrane 8A

Normal Function
The TIMM8A gene provides instructions for making a protein that is found inside mitochondria, which are structures within cells that convert the energy from food into a form that cells can use. Mitochondria have two membranes, an outer membrane and an inner membrane, which are separated by a fluid-filled area called the intermembrane space. The TIMM8A protein is found in the intermembrane space, where it forms a complex (a group of proteins that work together) with a very similar protein called TIMM13. This complex transports other proteins across the intermembrane space to the mitochondrial inner membrane.

Health Conditions Related to Genetic Changes

Deafness-dystonia-optic neuronopathy syndrome
At least 15 mutations in the TIMM8A gene have been found to cause deafness-dystonia-optic neuronopathy (DDON) syndrome. Most of these mutations result in the absence of functional TIMM8A protein inside the mitochondria, which prevents the formation of the TIMM8A/TIMM13 complex. Researchers believe that the lack of this complex leads to abnormal transport of proteins across the intermembrane space, although it is unclear how abnormal protein transport affects the function of the mitochondria and causes the signs and symptoms of DDON syndrome.

Some people with DDON syndrome have large DNA deletions that remove the entire TIMM8A gene and one end of a neighboring gene known as BTK. Mutations in the BTK gene cause X-linked agammaglobulinemia (XLA), which is characterized by an increased susceptibility to infections. Individuals with large DNA deletions that include the TIMM8A gene and the BTK gene have the signs and symptoms of both DDON syndrome and XLA.
Chromosomal Location

Cytogenetic Location: Xq22.1, which is the long (q) arm of the X chromosome at position 22.1

Molecular Location: base pairs 101,345,656 to 101,348,969 on the X chromosome (Homo sapiens Annotation Release 109, GRCh38.p12) (NCBI)

Credit: Genome Decoration Page/NCBI

Other Names for This Gene

- DDP
- DDP1
- deafness/dystonia peptide
- DFN1
- MGC12262
- TIM8A_HUMAN
- translocase of inner mitochondrial membrane 8 homolog A
- translocase of inner mitochondrial membrane 8 homolog A (yeast)
